

PERRY ENGINEERING

Civil Engineering Project Manager

Perry Engineering is looking for a Civil Engineering Project Manager with a minimum of six years' experience in the field of land development and/or public works projects. Our current workload includes residential subdivisions for national production builders, site plans for commercial projects as part of an architect led team, and public works projects as part of our as needed contracts with local municipalities. We would prefer a civil engineer with current registration in Arizona, or someone who is pursuing professional engineer registration, though this is not necessarily required if the candidate can show experience in taking a project from start to finish. Strong communication skills, experience in AutoCAD Civil 3D, knowledge of local codes, procedures and jurisdictional staff are a must. We offer a competitive benefit package, salary, and a friendly work environment.
