

Project Manager for leading Structural Steel Company. Bell Steel is growing and wants you to advance with us as opportunities and diversity are available in our pursuit of excellence. This respected position starts with a Min of 5 years' experience as a structural steel Project Manager. FabSuite software experience is a plus along with strong organizational skills and a willingness to advance in leadership.

As an industry leader, Bell Steel aspires to excellence seeking qualified, experienced, and self-motivated employees. Here are just some of the benefits of working with the Bell Steel family:

- Bell Steel encourages a safe, supportive, and positive work environment that promotes advancement within the company
- Competitive market wages, health benefits, 401k, annual bonus, paid vacation, paid holiday's, quality PPE, safety training, company vehicle, cell phone/IPAD

Bell Steel Project Manager responsibilities include but are not limited to:

- Manage multiple projects simultaneously with senior management and shop/field supervisors as a team supported approach
- Coordinate drawing releases with the project coordinators to the shop for fabrication and work with installation crews to coordinate timely deliveries and installation
- Coordinate RFI's and Change Orders
- Develop and maintain customer relationships to enhance the company's ability to procure projects
- Review weekly project status reports, complete project billings, and provide information as required to keep upper management and clients properly informed
- Review with the project team the preliminary schedule and the detailed project schedule when available
- Monitor project activities, resolve challenges which arise, especially those pertaining to changes, deficiencies, and punch list items

Salaried compensation is dependent on the experience level of the individual.
